

ibidi Practical Course:

**Setup and Analysis
of Chemotaxis Assays**

Course Objectives

The aim of this two-day course is to learn about the setup and analysis of chemotaxis assays with the ibidi μ -Slide Chemotaxis.

In addition to practicing handling the slide, you will perform a whole chemotaxis assay that includes sample preparation with cancer cells, live cell imaging, single cell tracking, and data analysis.

Target Group

The course is intended for scientists and technicians, who have extensive experience with cell culture and sterile working techniques.

Location

ibidi Headquarters, Gräfelfing near Munich, Germany
