

Defined Shear Stress

- Software-based flow programming including shear stress and shear rate calculation
- Simulation of all physiological flow patterns with a wide shear stress range (0.1–200 dyn/cm²)

Closed System

- Long-term sterile setup
- Recirculating medium at low volumes
- No medium contact with mechanical parts

Physiological Conditions

Easy Workflow

Standard Luer Ports

Parallelization

Flow Chamber Surfaces

Microscopy Readout

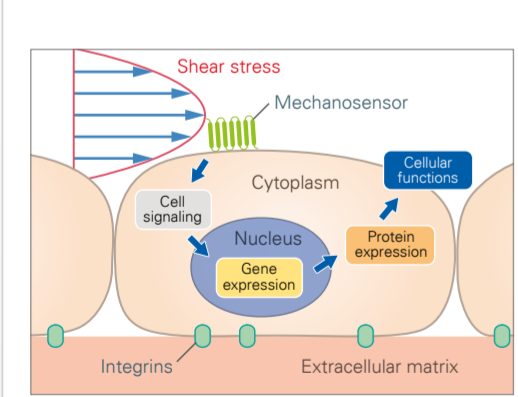

The ibidi Pump System Revolutionize Your Cell Culture Assays

- Establish perfused *in vivo*-like cell cultures
- Simulate defined flow types (laminar unidirectional, pulsatile, and oscillatory)
- Compatible with μ-Slides with Luer adapters
- Combine with microscopes for live cell imaging under flow

Wall Shear Stress

- Simulation of mechanical forces (shear stress) created by fluid flow in biofluidic systems (e.g., blood or lymphatic vessels, nephrons)
- Physiological long-term cultivation of vascular endothelial and epithelial cells
- Analysis of relevant readouts, such as cell morphology, behavior, and physiology

Perfusion-Based 3D Bioreactor

- Physiological long-term 2D and 3D cell culture (e.g., of organoids, spheroids, organs-on-a-chip)
- Continuous medium exchange for constant nutrient supply
- Ensured optimal cell viability and health
